

what perfect selection would buy

where that headroom comes from

- measured, without labels
- operator-selection oracle: a ceiling, not a competitor
- a challenge that admits restoration (Fig. 3)
- nothing clears the noise-injection oracle

Perfect selection over the four base operators buys +9.77;
the prior adds +4.14, five learned restorers only +2.51.

37 per cent of it, 5.55 of 14.83, is from the four
challenges that restore nothing: chance, not gain.
