

the rule, on the crop at its original size

- $b < 0.1206$ → Gamma 5.6%
- $c < 0.1061$ → CLAHE 11.9%
- $e < 0.0726$ and $b > 0.4085$ → Stretch 7.0%
- otherwise → no enhancement 75.5%

what each branch is worth

- the rule over no enhancement, +2.15
- always-DCP over V-B, +2.49

The rule is not wrong where it acts.
It is expensive where it declines to.

All 1,352 clean crops take the passthrough branch,
so the clean cost is exactly zero.
