

accuracy against escalation rate

two front ends

- base: frozen 4-operator rule
- base: DCP-augmented selector V-B
- - - AdaIR alone, applied to every image
- ★ the operating point the cascade selected

The same cascade buys +1.16 on the frozen rule and only +0.15 on the selector.

The deep model is not adding capability; it fills a hole a better front end fills.

AdaIR alone reaches 57.78 (dashed), below the selector's own 58.23.

the gate admits 18.9 per cent; the curve is all of it
